Education

- **Artificial and Natural Intelligence Toulouse Institute (ANITI)** — Toulouse, France
  PhD Candidate in Applied Mathematics affiliated with Paul Sabatier University. — *Sep 2020 - Aug 2023 (expected)*

  Thesis title: Collective Perception, optimization of the V2X frequency channel(s) usage and CP message contents based on A.I.

  Advisers: Pr. Daniel DELAHAYE (French Civil Aviation University), Pierre MARÉCHAL (Toulouse Institute of Mathematics) and Vincent MARTINEZ (NXP Semiconductors).

  In this project, various methods to design a more efficient communication scheme between vehicles were studied. The project comprises the derivation of an online anomaly detection algorithm, data clustering, dimensionality reduction and other unsupervised learning methods. Probability and stochastic processes were also central to proving performance guarantees.
